

## 2010 Prius LH sweep-belt moulding

This removal/install process took me 15 minutes flat and saved me about 50 install charge at the stealership. I removed the cover in front (pic1),

and lifted the clip shown in (pic2).

Then I carefully bent the strip inward toward the cabin to release the groove that spans the entire way back. You can see the groove on the bottom of the stripping in (pic3) even though that is a pic from the outside of the car.

Once that groove is loosened, continue slowly to ward the back of the door until it is all loose (pic4).

The last clip to remove at the back of the door is shown in (pic5) ready to be re-installed.

Just carefully take that clip out. Reverse install is literally a 'snap'. Do not use any metal objects as you may scratch you car's finish; I used no tools at all...
